equally well by both cAMP and cGMP.

TISSUE SPECIFICITY: Olfactory neurons.

SIMILARITY: Belongs to the cyclic nuclectide-gated cation channel (TC 1.A.1.5) family.

SIMILARITY: Contains 1 cyclic nucleotide-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       17;

neurons.

- SUBUNIT: Heterooligomer of OCNC1 and OCNC2 subunits.
- SUBUNIT: Heterooligomer of OCNC1 and OCNC2 subunits.
- SUBUNIT: Heterooligomer of ocncin membrane protein.
- SIMILARITY: Diffactory neurons.
- SIMILARITY: Belongs to the cyclic nucleotide-binding domain.
- SIMILARITY: Contains 1 cyclic nucleotide-binding domain.
- SIMILARITY: Contains 1 cyclic nucleotide-binding domain.
- CAUTION: It is uncertain whether Met-1 or Met-2 is the initiator.

Dhallan R.S., Yau K.W., Schrader K.A., Reed R.R.;
Primary structure and functional expression of a cyclic nucleotide-activated channel from olfactory neurons.";
Nature 347:184-187(1990)
-!- FUNCTION: Odorant signal transduction is probably mediated by a Gprotein coupled cascade using cAMP as second messenger. The protein coupled cascade using cAMP as second messenger. The olfactory channel can be shown to be activated by cyclic nucleotides which leads to a depolarization of olfactory sensory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

-!- SUBUNIT: Homotetramer or higher oligomer.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to the cyclic nucleotide-gated cation channel (TC 1.A.1.5) family.
-!- SIMILARITY: Contains 1 cyclic nucleotide-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    MEDLINE=97415722; PubMed=9268598; Zhang Q., Pearce-Kelling S., Acland G.M., Aguirre G.D., Ray K.; Zhang Q., Pearce-Kelling S., Acland G.M., Aguirre G.D., Ray K.; Canine rod photoreceptor cGMP-gated channel protein alpha-subunit: studies on the expression of the gene and characterization of the CDNA.";

--- SUBDANT: Homoterramer or higher oligomer.
--- SUBDANT: Homoterramer or higher oligomer.
--- SUBCELLULAR LOCATION: Integral membrane protein.
--- TISSUB SPECIFICITY: Rod cells in the retina.
--- SMILARITY: Belongs to the cyclic nucleotide-gated cation channel
--- SIMILARITY: Contains 1 cyclic nucleotide-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE=92112723; PubMed=1370452; Wohlfart P., Faase W., Molday R.S., Cook N.J.; Alane W., Molday R.S., Hantibodies against synthetic peptides used to determine the topology "Antibodies against synthetic peptides used to determine the ropology and site of glycosylation of the cGMP-gated channel from bovine rod
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           photoreceptors.",
J. Biol. Chem. 267:644-648(1992).
J. Biol. Chem. 267:644-648(1992).
-!- FUNCTION: Visual signal transduction is mediated by a G-protein coupled cascade using compa as second messenger. This protein can be activated by CGMP which leads to an opening of the cation channel and thereby causing a depolarization of rod
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   [2]

"Selective loss of cone function in mice lacking the cyclic nucleotide-gated channel CNG3.";
Proc. Natl. Acad. Sci. U.S.A. 96:7553-7557(1999).
-: FUNCTION: Visual signal transduction is mediated by a G-protein coupled cascade using CMPP as second messenger. This protein can be activated by cyclic GMP which leads to an opening of the cation channel and thereby causing a depolarization of cone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    cation channel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      :

S-09-275-252A-19
Sequence 19, Application US/09275252A
Patent No. 6641997
GENERAL INFORMATION:
APPLICANT: MacKinnon, Roderick
APPLICANT: The Rockefeller University
TITLE OF INVENTION: Assays for Screening Compounds Which Interact With
TITLE OF INVENTION: Cation Channel Proteins, Mutant Prokaryotic Cation
TITLE OF INVENTION: Channel Proteins, and Uses Thereof
FILE REFERENCE: 018512-002901US
CURRENT APPLICATION NUMBER: US/09/275,252A
CURRENT FILING DATE: 1999-03-24
PRIOR APPLICATION NUMBER: US 09/045,529
PRIOR FILING DATE: 1998-03-20

Sequence 10, Application US/08997685A

Patent No. 6518121

GENERAL INFORMATION:
APPLICANT: The Trustees of Columbia University
APPLICANT: Taxadel, Eric
APPLICANT: Randel, Eric
TITLE OF INVENTION: Brain Cyclic Nucleotide Gated Ion Channel and Uses Thereof
TITLE REFERENCE: 0575/54806
CURRENT APPLICATION UNMERR: US/08/997,685A
CURRENT APPLICATION UNMERR: 1997-12-12
NUMBER OF SEQ ID NOS: 60
SOFTWARE: Patentin version 3.1
SEQ ID NO 10
SEQ ID NO 10

```

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
